Make for jEdit Plugin Example: jEditPlugins.jEditMakefileEditor; A: As of version 6.3.3, there is a new, easy-to-use Make plugin that allows you to build directly from inside the editor. You can install it by installing the jEdit distribution from and then you can install the plugin from this download. With the plugin, you can right-click on a project and select "Make" to build the project. You can also build a project from the command line with the following command: jed -x build [] A: There is a plugin for JEdit available here: It has an example that you can run to show it in action: The build system it shows is based on the standard Makefile that comes with the GNU make. It also provides a simple interface to build a project with the build system. You can then run the build using the command: jed -x build [] The plugin comes with a simple example Makefile for a project containing just a standard Makefile. Noninvasive evaluation of the fibrosis extent in liver cirrhosis: the analysis of elasticity of the liver. The purpose of the paper was to evaluate noninvasively the degree of the hepatic fibrosis by means of measuring the liver elasticity. The study comprised 63 patients with liver cirrhosis. All patients underwent liver ultrasonography (US) and liver elasticity measurements using the controlled-stress US (LiverPoint) in the correct echo-free areas. According to the histological results, a patient was divided into two groups: group A included 25 patients with no or minimal fibrosis (mild fibrosis), and group B, included 38 patients with moderate to severe fibrosis (advanced

Allows to embed macro definitions (macros) in JEDI file. You can define your own macros or use macro built by other users. Saving everything in XML format makes it easy to manage through various formats. The XML based format can be easily converted to plain text, html or RTF.
