The phone was taken with various minor adjustments using the app. In particular, the main image was edited using selections, masking, fills and cloning. After testing several basic techniques, such as Smart Sharpen, I determined that Photoshop's AI Sharpen looks good with my iPhone 6S. I opted to use adaptive lighting and a bevel-effect on the knife to give the knife a slight curvature. Alfred 3, the \$9 app that is included with the App Store, helped me to determine the proper settings for my phone. **BELOW:** An illustration created in Adobe Photoshop using Photoshop Sketches on the iPad Pro. A Pencil tracing was done; I then used the working layer to apply various elements such as gradients, colors, blur, etc. by holding the Touch and Drag tool to change the top of the existing working layer. I moved the image around using the Direct Selection tool and the Free Transform tool (the rectangle arrow pointing to the right in the lower left on the left column above is being dragged to move the layer).
